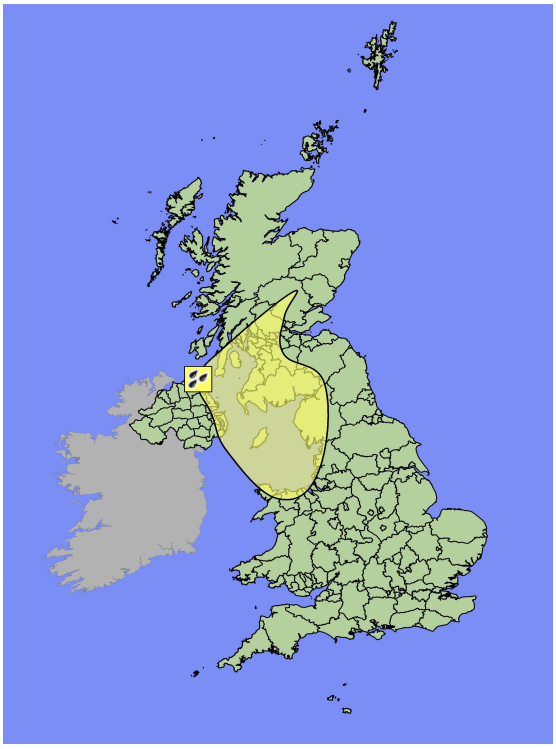
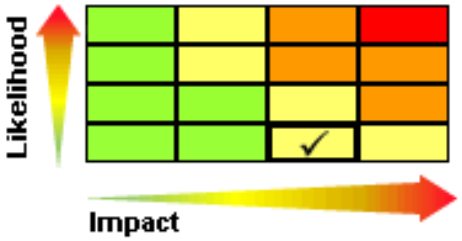
National Severe Weather Warning Service





Chief Forecasters Assessment
The deep depression is likely to push its band of heavy rainfall further northeast into Tuesday, with the possibility of 40 to 60mm of rainfall in the indicated areas. Strong winds may exacerbate the situation at first, by leading to leaves and other minor debris blocking drains.

It should be noted at this stage there is still uncertainty as to how far the heavier rain extends east.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **00:00 on Tue, 25th Oct 2011** until **23:59 on Tue, 25th Oct 2011**

A period of heavy rain seems likely to affect parts of Northern Ireland, southern and central Scotland, northern England and north Wales during Tuesday, tending to ease from the south later. Timings are subject to some uncertainty. The public should be aware that there may be some disruption to travel due to standing water or localised flooding
